EXPERT FAQs

THE CHALLENGE PARENTS FACE

Practice beats talent, but you'd never know it from the way we talk to kids. We call one child "a natural" and another "not sporty," as if ability were fixed at birth. And the danger is quiet but real: a child who believes they're either gifted or hopeless stops doing the one thing that actually decides the outcome — t

— THE 30-SECOND ANSWER

Why practice beats talent - and how to build it

QUICK ANSWER

Does practice really beat talent? Most of the time, yes. Talent gives a small head start, but skill is built through focused, repeated practice over time. A child who practises steadily usually overtakes a more "gifted" child who doesn't. Just as important, believing effort works keeps children trying — and trying, repeated, is what turns ability into achievement.

DO THIS

5 ways to help your child see that practice beats talent

Work through these in order. Small, consistent reps beat one big push.

1**Make it small and daily**

Ten focused minutes a day beats a three-hour session once a week. Consistency builds skill.

2**Praise the practice, not the "talent." Say**

"your serve got better because you kept at it," not "you're a natural."

3**Track progress they can see**

A simple chart or video shows them how far steady effort has carried them.

4**Normalise the messy middle**

Remind them that getting worse before better, and missing before making, is what practice looks like.

5**Let them watch the work behind greatness**

— the training, not just the trophy — so success stops looking like magic.

— KEEP AN EYE OUT

What the "talented" label does to a child

- ✓ A child praised as "gifted" may avoid harder challenges, afraid to lose the label.
- ✓ A child told they're "just not good at it" gives up before practice ever gets a chance.
- ✓ When results are praised but effort is ignored, kids stop valuing the grind that builds skill.
- ✓ Comparison with "naturals" makes ordinary, necessary practice feel pointless and shameful.

— COMMON QUESTIONS

Quick answers for parents

Is it true that practice beats talent?

Most of the time, yes. Talent offers a small head start, but real skill is built through focused, repeated practice. A child who practises steadily usually overtakes a more "gifted" peer who relies on natural ability alone. Believing effort works also keeps children trying, which compounds over time.

Did Serena Williams really train on public courts?

Yes. Serena and her sister Venus trained on public courts in Compton, California, coached by their father with modest equipment and long daily hours. Their rise from those courts to tennis greatness is a vivid example of how relentless practice, not just talent, builds champions.

Why is it bad to call my child "talented"?

Praising talent can tie a child's identity to looking effortless, so hard work starts to feel risky. They may avoid challenges that could expose them as "not gifted." Praising effort and practice instead keeps them trying when things get tough, which is what actually builds skill.

How do I get my child to practice without fighting?

Keep it small, daily, and rewarding. Ten focused minutes beats an occasional marathon. Praise the effort, track visible progress, and normalise the messy middle where they get worse before better. When practice feels doable and their improvement is visible, resistance drops.

How much practice does a child really need?

Less than you'd fear, if it's consistent. Short, focused, regular practice usually beats long, rare sessions. The key is steadiness — small daily reps that add up — plus enough enjoyment that your child wants to keep going rather than dreading it.

How does a practice habit help my child's future?

The belief that effort builds ability is one of the most powerful gifts a child can have. It frees them from "I'm just not good at this" and lets them learn any skill they choose — in school, work, and life. A practice habit turns talent into achievement again and again.

READING HELPS. PRACTICE STICKS.
